

GLASS DÉCOR LAMINATE

Replacing stone and tile for wall panels and partitions

Product philosophy

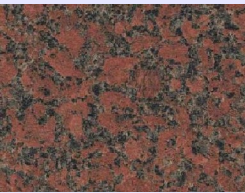

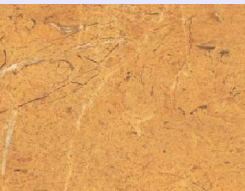

We believe that nothing can be more attractive than designs made by nature. But in times of economic and ecologic pressure on the planet it is not acceptable any more to forage on the natural reserves of stones and marble, only to transport them across the globe and put them in a shop, office or shower.

Our approach is to use locally produced composites of laminate and glass and to replace the foray of the globe with an intelligent and innovative product.

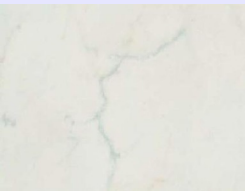

About the product

Glass Décor Laminat is a thick decorative laminate that is prepared with a special high-tech and high-performance adhesive layer. It is laminated onto the backside of glass.

Use of Glass Décor Laminat

The product is intended to replace marble, stone and tiles on walls, partition systems, parapets, railings and even on ceilings, doors and interior decoration.

Commercial buildings

If you intent to keep a high-quality profile while replacing expensive and heavy stone for shop design, hotel lobbies and offices, Glass décor Laminat is the right product for you.

Combine it with the glass quality that you require and create an esthetic and cost-efficient interior material.

Showers

You don't like tiles any more, but you don't want the expensive and heavy marble or natural stone in your shower or bathroom ? Solve it with large-format glass and Glass Décor Laminat.

Kitchen

You hate the gaps between tiles and you want to eliminate unhygienic gaps? Use a large scale glass plate with Glass Décor Laminat at the backside to give your kitchen an interesting and cost efficient kick.
