

Heating Core System

Components:

- heating mat fully cabled and glued to a wood panel with an insulating foam foil underneath
- 2 wooden lists
- 4 screws
- The skin (front panel)

Heating Core System

Backside: third list as spacer for the center of backside
(a bit shorter at the bottom),
Power supply glued to the bottom

Heating Core System

The lists left and right are screwed directly to the wall, providing a stable and slim fixing
A reflective foil should be inserted between the lists and the wall – it can be fixed in the same step of screwing or it can be pre-assembled with staples to the lists.

Heating Core System

The skin has L-profiles left and right (plastic, aluminium, wood)

The skin is screwed on the side with 4 small screws to the inner wooden lists.

Heating Core System

Place a perforated aluminium sheet formed to a U on the top and you are ready
Here: measuring equipment prevents the grill to be placed correctly.
